

CONCRETE LINING PRODUCTS

BAGCRETE 40MPa

When you want more muscle, **Bagcrete 40MPa** tackles the heavy loads. For constructing boxfronts or winchbends, machinery foundations or rail turn out bases, concrete piers or trackless machinery workshops. Bagcrete 40MPa really puts it back into it.

Each 30 kilogram polypropylene bag of concrete mix is manufactured to ACC specifications 711/2 under our strict quality management programme.

Only the amount you need is used because Bagcrete can easily be stored and taken right to the place it is required.

It is convenient to use underground with no need for batching because each bag is correctly proportioned to ensure correct strength.

Bagcrete has an extremely high work-ability and is thoroughly suitable for hand compaction and any type of form work.

Our quality controls mean aggregate sizing is always correct, unlike the mine aggregate underground.

So as you can see, when you want to build it right, build with Bagcrete - we've done most of the work for you.

BAGCRETE 25MPa

Build it better with Bagcrete. The easiest, most efficient solution to any civil construction task. On surface or underground.

A dry pre-mixed concrete aggregate for civil construction work anywhere. Bagcrete comes in two popular compressive strengths.

Bagcrete 25MPa handles light construction such as workshop floors with pedestrian traffic or underground tip constructions.

Whether you're building ventilation walls or foundation walls, waiting place construction or drain construction - Bagcrete does the job perfectly.

BAGCRETE 40 & BAGCRETE 25
