PACKWEDGE WEeping 15

Finally, a complete packwedge system which provides you with everything you need to pre-stress matpacks.

Packwedge Weeping 15 is the ideal prebagged cementitious grout used for pre-stressing.

Used in conjunction with weeping grout pressure cushions in stopes, Packwedge Weeping obtains strengths of 6MPa in 7 days and 14MPa in 28 days.

However, when you choose Packwedge Weeping 15, you get far more than a grout.

Benefits

- No need for wooden wedges and excessive labour. Always correctly stressed
- Easy to use, insensitive to water/cement ratios. No pump-life problems. Grout bag correctly filled at all times
- Matpacks can be blasted on immediately
- Correct sand grades ensures pumpable grout that won't damaged pumps

CLP offers a complete pre-stressing system including grout, bag, packwedge pump and mixer complete with application lance.

In addition, an underground back-up service is supplied free of charge to continually train employees to use the system, ensuring successful implementation.

Each 25 kilogram polypropylene bag of grout is manufactured as per AAC specifications 273/6 under our strict management programme.

So when you want more than just part of a solution – Packwedge Weeping 15. The Total packwedge system.

RSS GROUT

RSS Grout is the pumpable grout for permanent support of back areas and gullies in stopes of shallow mines.

RSS Grout resolves the inability of other grout packs to yield. It can be tailored to provide sufficient force to the hanging wall to control falls of ground yet have good yielding characteristics.

The supreme characteristics of the grout pack can now be engineered to duplicate and even improve upon those exhibited by timber packs.

Benefit

- No fire hazard
- Quick and easy to erect
- Not labour intensive
- Lower shaft time required
- Less transport underground
- Strong and stiff yet yielding
